10.1.1. Remove Punctuations from a String 07:09

Write a Python program to remove all punctuation marks from a given string and print the resulting string.

Punctuation marks are special characters that are not letters, digits, or spaces.

The program should keep all letters (uppercase and lowercase), digits, and spaces, but remove all punctuation marks.

Input Format:

- Single line contains a string (may include letters, digits, spaces, and punctuation marks).

Output Format:

- Print the string after removing all punctuation marks.

Note:

- Refer to sample test cases for better understanding.

Sample Test Cases +

removeP... Submit

```python
str=""
st=input()
for i in st:
    if i.isalnum() or i.isspace():
        str = str+i

print(str)
```
