Step 1 : Start
Step 2 : Input string str
Step 3 : Find length of string and store in l
Step 4 : Set flag as True
Step 5 : Repeat steps for each position from start to middle of string
Step 6 : Compare character at beginning with corresponding character from end
Step 7 : If both characters are not equal, set flag as False
Step 8 : After completing all comparisons, check flag
Step 9 : If flag is True, print "Palindrome"
Step 10 : Else print "Not a Palindrome"
Step 11 : Stop

9.1.2. Palindrome or Not 03:13

Write a Python program to take a string as input and check whether the given string is a palindrome or not. A palindrome is a string that reads the same forwards and backward.

Input Format:

- A single line of input contains a string

Output Format:

- If the input string is a palindrome, print "Palindrome", otherwise print "Not a Palindrome"

Sample Test Cases +

Explorer

palindro... Submit

```python
s = input()
if s == s[::-1]:
    print("Palindrome")
else:
    print("Not a Palindrome")
```

Debugger

Average time 0.006 s 6.20 ms

Maximum time 0.008 s 8.00 ms

2 out of 2 shown test case(s) passed

3 out of 3 hidden test case(s) passed

Test case 1 8 ms

Test case 2 5 ms
